

Appendix B: Uni- and bivariate sample descriptives

The total sample consisted of 55,593 participants. Mean age was 33.06 (SD = 11.68). With respect to gender, 67% of participants reported female, 32% reported male, 1% reported “other.” With respect to marital status, 58% of participants reported being never married, 33% reported being currently married, 8% reported being previously married. With respect to type of area lived in when a child, 22% of participants reported rural, 37% reported suburban, 40% reported urban. With respect to language, 66% of participants reported that English is their native language, 34% reported that English is not their native language. With respect to race, 20% reported Asian, 1% reported Arab, 7% reported Black, 61% reported White, Native American, or Indigenous Australian (note that these three options were merged due to a coding mistake), and 1% did not report their race.
